

The Water Cycle

Fill in the blanks below with words from this box:

evaporation	Suriny	precipitate	condenses
evaporates	clouds	vapor	atmosphere
heating	heavy	oceans	lakes
droplets	plants	hail	glaciers
runoff	snow	cycle	crystals
rain	rivers	streams	
Evaporation			
•		day, water in a glass	of water seems to
slowly disappear. This is because the energy from the sun is			
the water up and turning the liquid water into water			
		alled	
	•		
the water, it becomes an invisible gas in the Evaporation takes places all over the earth,			
		•	
		and	where
there is lots of water	?.		
Condensation			
	ises it cools of	fand	into
As the water vapor rises, it cools off and into water into water If the water vapor becomes extremely cold,			
t will form ice instead of water droplets. As the			
water droplets or ice crystals grow bigger and more numerous, they form
